

Eric Vermetten

Leids Universitair Medisch Centrum, Psychiatry department, Leiden, The Netherlands

The research internship will be hosted by Leiden University Medical Center. It is a collaborative effort with Arq Psychotrauma Expert Group and Ministry of Defense. The applicant will be able to explore the variety of clinical studies in the neuroscience of traumatic stress that are ongoing at these centers. This will range from clinical cohort study in service personnel after deployment to combat, neuroimaging of hostility and aggression, clinical assessment, pharmacotherapy for nightmares in PTSD to novel technology enhanced studies in exposure based treatment. In order to benefit maximally in the first week the student will be exposed to a range of projects and PhD students that are in the midst of their projects. In the second week one specific study will be chosen for a more in depth experience. All depends on the studies that are ongoing at the time of study visit.
